## MULTIPLICATION: Y1

## Understanding the operation and vocabulary

## Understanding the operation

Begin to understand multiplication by using concrete objects, pictorial representations and arrays to solve problems; make connections between the different representations.
Begin to use the vocabulary involved in multiplying

## Vocabulary

Understand the vocabulary related to multiplication

## ones, groups, lots of, doubling

repeated addition array, row, column,
groups of, lots of, times, columns, rows
longer, bigger, higher etc
times as (big, long, wide ...etc

## Generalisations

Understand 6 counters can be arranged as
$3+3$ or $2+2+2$

Understand that when counting in twos, the numbers are always even

## Misconceptions

- Pupils may not ensure that all their groups have the same amount when representing a multiplication.
- Pupils tend to use the repeated addition representation of multiplication much more than scaling.

## Number facts

Count in multiples of twos, fives and tens 0246810 .

## Know doubles of all numbers to 10

$$
\begin{array}{ll}
\text { Double } 3 \text { is } \square & 8+8=\square \\
\text { Double } 5 \text { is } \square & 6+6=\square
\end{array}
$$

Know that multiplication is related to doubling and counting groups of the same size

## Begin to recognise odd and even numbers

Use cubes to make 9 and recognise it is odd (as the cubes cannot be paired)

## Mental Methods and jottings

## Counting

Count a set of objects by grouping in $2 \mathrm{~s}, 5 \mathrm{~s}$ or 10 s Count these marbles (2 at a time)

Solve problems involving doubling and equal groups I need 5 eggs to bake a cake. How many eggs will I need to bake 2 cakes?

## Counting on

There are 3 pots. Each pot has 2 seeds in. How many seeds are planted?
(by counting on in twos using objects or pictures to keep track)

## Doubling and halving

A ladybird has 6 spots on each wing.
How many spots are there altogether?
(by recognising $6+6=12$ )

## Recording

https://www.ncetm.org.uk/resources/52830

## No formal written layout

Pupils will be recording their mathematics using pictorial representations, arrays, number lines and mathematical statements.

Solve one-step problems involving multiplication and division, using concrete objects, pictorial representations and arrays

How many legs have 5 teddies got altogether?

How many fingers are on 6 hands?

Counters, objects, pictures, arrays, number lines, bead strings, bundles of straws

Begin to group in rows and columns to aid counting

## MULTIPLICATION: Y2

## Understanding the operation and vocabulary

## Understanding the operation

Understand multiplication as

- repeated addition
- describing an array
- scaling (to compare 2 items) e.g. twice as long
- correspondence problems - one to many

Show that multiplication of two numbers can be done in any order
recognise that $5 \times 3$ is equal to $3 \times 5$
Recognise the inverse relationship between multiplication and division
Write the related number sentences:
$5 \times 3=15 \quad 3 \times 5=15 \quad 15=5 \times 3 \quad 15=3 \times 5$
$15 \div 3=5 \quad 15 \div 5=3 \quad 3=15 \div 5 \quad 5=15 \div 3$
Write mathematical statements using the multiplication
$(\times)$, and equals ( $=$ ) signs
$4 \times 5=20 \quad 16=8 \times 2 \quad 3 \times \square=15$
$\square=7 \times 2 \quad 20=\square \times \square$

## Vocabulary

Understand the vocabulary related to multiplication
Also see Y1
multiple, multiply, multiplication array, multiplication tables / facts, groups of, lots of, times, columns, rows, once, twice, three, ten...times a big, repeated addition

## Generalisation

Repeated addition can be shown on a number line
Use an array to explore how numbers can be organised into groups. Link multiplication and division

Explore what happens when a number is multiplied by 10. (Avoid add a zero!)

## Number Sense and Fluency

## Number facts

Count in steps of 2,3 , and 5 from 0

$$
\begin{aligned}
& 0369121518 \ldots . . .30 \\
& 5045403530
\end{aligned}
$$

Recall doubles of all numbers to 15 and doubles of multiples of 5 to 50
Double 13 is $\square \quad 11+11=\square \quad$ Double 25 is $\square$
$45+45=\square$
Recall and use multiplication facts for the 2,5 and 10 multiplication tables
3 groups of 10 multiply 7 by 2 multiplied by 4
Recognise odd and even numbers
Explain why 27 is an odd number
Link multiplication with repeated addition
$3 \times 5=5+5+5$

## Mental Methods and Jottings

Calculate mathematical statements for multiplication within the multiplication tables

$$
3 \times 5=
$$

$\qquad$
$\qquad$ $=14$
$4 \times 5=$ $\qquad$

## Counting on

$7 \times 5$ ( count on in fives using fingers to keep track)
With jottings $3 \times 5$ (count on in threes using a number line to keep track)

## Recording

https://www.ncetm.org.uk/resources/52830

## No formal written layout.

Pupils will be recording their mathematics using pictorial representations, arrays, number lines and mathematical statements.

## concrete

Repeated addition linked to multiplication

Use of arrays

## PICTORIAL

Demonstrate commutativity

## 0000 <br> $2 \times 4-8$

- Pupils may find it hard to understand what operation they need to use from a word problem because there are so many ways to imply a multiplication
- Pupils tend to use the 'lots of' representation [repeated addition] of multiplication much more than scaling. Similarly, they may use sharing more than grouping (which makes using an array for division harder).
- Pupils may not recognise key trigger words for multiplication and division and so use the wrong operation when solving a word problem.

Use arrays to reinforce the link between multiplication and repeated addition

## $5+5+5=15$

$3+3+3+3+3=15$
$3 \times 5=15$

## MULTIPLICATION: Y3

## Understanding the operation and vocabulary

## Understanding the operation

Understand multiplication as

- repeated addition
- describing an array
- scaling - comparison and enlargement
- correspondence problems - one to many and many-to-many

Understand commutativity and associativity
Recognise that $7 \times 4$ is equal to $4 \times 7$
Recognise that if calculating $2 \times 3 \times 10$ the numbers can be combined in any order
Use models and images to demonstrate distributive and commutative laws

Understand the inverse relationship between multiplication and division
write the related number sentences

| $6 \times 3=18$ | $3 \times 6=18$ | $18=6 \times 3$ | $18=3 \times 6$ |
| :--- | :--- | :--- | :--- |
| $18 \div 3=6$ | $18 \div 6=3$ | $3=18 \div 6$ | $6=18 \div 3$ |

Solve missing numbers problems involving multiplication

$$
\begin{aligned}
& 3 \times \square=15 \quad \square=2 \times 7 \quad 20=\square \times \square \\
& 25+10=5 \times \square \quad 15<\square \times 2 \square \times \square>20
\end{aligned}
$$

## Vocabulary

Understand, read and spell vocabulary related to multiplication correctly
Also see Y 1 and Y 2
$12 \times 5=60$
factor $\times$ factor $=$ product
partition, grid method, inverse, product

## Number Sense and Fluency

## Number facts

Count from 0 in multiples of $4,8,50$ and 100
08162432
500450400350
50,100,150,200, 250
Recall doubles of all numbers to 20 , doubles of multiples of 5 to 100 and doubles of multiples of 100 to 500
Double 17 is $\square$
$85 \times 2=\square$
Double 300 is $\square$

Recall and use multiplication facts for the 3,4 and 8 multiplication tables and begin to use knowledge of place value to derive related facts
multiply 9 by 4 the product of 8 and $450 \times 4$

## Mental Methods and Jottings

Calculate mathematical statements for multiplication using the multiplication tables that they know, including for two-digit numbers times one-digit numbers

Use doubling to connect 2,4 and 8 multiplication tables

## Counting on

$5 \times 14$ (by counting on in fives from 50)
with jottings
$4 \times 13$ (by counting on in fours from $4 \times 10$ using a
number line to keep track)

## Partioning (with distributive law)

Without crossing the tens boundary
$32 \times 3=(30 \times 3=90,2 \times 3=6,90+6=96)$

## with jottings

Crossing the tens boundary
$17 \times 5=(10 \times 5=50,7 \times 5=35,50+35=85)$

## Doubling and halving

$9 \times 20$ (multiply by 10 and then double)

## Recording

https://www.ncetm.org.uk/resources/52830
Begin to use formal written methods for two-digit numbers multiplied by one-digit numbers
CONCRETE

4 rows of 10

4 rows of 3

Show the link to arrays when multiplying larger numbers

4 rows of 13

PICTORIAL

## Generalisations

Connecting $\times 2, x 4$ and $\times 8$ through multiplication fact Comparing times tables with the same times tables which is ten times bigger. If $4 \times 3=12$, then we know $4 \times$ $30=120$. Use place value counters to demonstrate this.

When pupils know multiplication facts up to $\times 12$, do they know what $\times 13$ is? (i.e. can they use $4 \times 12$ to work out $4 \times 13$ and $4 \times 14$ and beyond?)

## MISCONCEPTIONS

- Pupils think that numbers ending in 3 will be multiples of 3 and so on
- Pupils may assume that, since multiplication is commutative, division is commutative and can be done in any order
- Pupils may not see how an array can be used to support division, only multiplication.
- Pupils with weak understanding of how to represent a multiplication as an array may struggle to represent and calculate a 2dx1d multiplication and fail to see why they need to be able to partition it. They may try to work with a very large array rather than sectioning it off and partitioning.
- Some pupils struggle to understand the range of language of multiplication and division. Similarly, they may find it hard to understand what operation they need to use from a word problem because there are so many ways to imply a multiplication or division
- Pupils often fail to recognise scaling problems as multiplication (or division problems) and find it hard to represent these practically.
- Some pupils may not yet have a strong understanding that multiplication is the inverse of division and so find it hard to move between the two operations.
- Pupils often fail to recognise scaling problems as multiplication (or division problems) and find it hard to represent these practically.
$9 \times 10=90$ Double 90 is 180
$28 \times 4$ (double and double again)

## Compensating and Adjusting

$18 \times 9=(18 \times 10)-18$
ABSTRACT

## Re-ordering calculations

$4 \times 12 \times 5=4 \times 5 \times 12$

## Using known facts and place value

Use manipulatives to demonstrate this.
$13 \times 3$

## Estimating and checking

Estimate the answer to a calculation
$38 \times 5$ is approximately $40 \times 4$

Use inverse operations to check

| $\times$ | 30 | 5 |
| :---: | :---: | :---: |
| 7 | 210 | 35 |

## MULTIPLICATION: Y4

## Understanding the operation and vocabulary

Understanding the operation
Continue to understand multiplication as

- repeated addition
- describing an array
- scaling - comparison and enlargement
- correspondence problems - one to many and many-to-many

Understand the distributive law
Recognise that $14 \times 5$ is the same as $10 \times 5$ added to $4 \times 5$

Continue to understand commutativity and associativity Recognise that $7 \times 9$ is equal to $9 \times 7$

Recognise that if calculating $4 \times 8 \times 10$ the numbers can be combined in any order

Continue to understand the inverse relationship between multiplication and division
write the related number sentences

| $6 \times 7=42$ | $7 \times 6=42$ | $42=6 \times 7$ | $42=7 \times 6$ |
| :--- | :--- | :--- | :--- |
| $42 \div 7=6$ | $42 \div 6=7$ | $7=42 \div 6$ | $6=42 \div 7$ |

Solve missing numbers problems involving multiplication
$3 \times \square=15 \quad \square=2 \times 7 \quad 20=\square \times \square$
$25+10=5 \times \square \quad 15<\square \times 2 \square \times \square>20$

## Vocabulary

Understand, read and spell vocabulary related to multiplication correctly
Also see Y1 Y2 and Y3
$12 \times 5=60$
factor x factor $=$ product
factor

## Number Sense and Fluency

## Number facts

Count in multiples of 6, 7, 9, 25 and 1000
07142128
300275250225200 ...
Derive doubles of multiples of 50 to 1000 and multiples of 1000
Double 950 is $\square$
$750 \times 2=\square$
Double 8000 is $\square$
$6000+6000=\square$

Recall multiplication facts for multiplication tables up to $12 \times 12$, and use place value to derive related facts

7 groups of $8 \quad$ multiply 9 by 6
the product of 8 and 1160 multiplied by 4
Recognise factor pairs
list the factors pairs of 32

## Mental Methods and Jottings

Multiply mentally using place value, known and derived facts, including: multiplying by 0 and 1 ; multiplying together three numbers

Use associative law:
$(2 \times 3) \times 4=2 \times(3 \times 4)$
$2 \times 6 \times 5=10 \times 6=12 \times 5=2 \times 30$

## Counting on

$3 \times 42$ (by counting on in threes from 120)

## With jottings

$7 \times 53$ (by counting on in sevens from $7 \times 50$ using a number line to keep track)
$7 \times 50=350$
$7 \times 53=371$

## Recording

https://www.ncetm.org.uk/resources/52830
Multiply two-digit and three-digit numbers by a one-digit number using formal written layout
CONCRETE

$126 \times 4$

PICTORIAL
$36 \times 4=144$

| $x$ | 4 |
| :--- | ---: |
| 30 | 120 |
| 6 | 24 |
|  | 144 |

$127 \times 6$

| $x$ | 100 | 20 | 7 |
| :---: | :---: | :---: | :---: |
| 6 | 600 | 120 | 42 |

$264 \times 8$

|  | 200 | 60 | 4 |
| :---: | :---: | :---: | :---: |
| 8 | 1600 | 480 | 32 |

## Generalisations

When they know multiplication facts up to $x 12$, do they know what $\times 13$ is? (i.e. can they use $4 \times 12$ to work out $4 \times 13$ and $4 \times 14$ and beyond?)

## Misconceptions

- When counting in multiples, many pupils believe that you stop after the 10th or 12th multiple they do not see that multiples are infinite.
- Pupils know that multiplication is commutative but they struggle to use it in questions by spotting pairs of numbers in a multiplication string that could be easily combined
- Pupils sometimes struggle to partition correctly when dividing up an array or using the grid method.
- Finding related facts to those already containing 0s can cause errors e.g. $200 \times 5$ can be incorrectly stated as 100
- When carrying out more complex multiplications, some pupils will fail to realise that multiplication is commutative and struggle to use the times tables that they know to tackle a related question.
- Pupils may struggle to represent scaling and correspondence problems
- Pupils find it hard to separate how you can 'make' a number by both ADDING and MULTIPLYING - they may lean towards additive relationships more than multiplicative e.g. they may not have understanding of how 24 can be made of 10 and 14 as well as 20 and 4 (and other examples).
- Pupils sometimes make errors when multiplying by 1 or 0 .
- When multiplying 3 digits together pupils can forget to use the product of the first calculation for the $2 n d$ part.

## Partitioning (using the distributive law)

$53 \times 6(50 \times 6=3003 \times 6=18300+18=318$
with jottings
$86 \times 7(80 \times 7=5606 \times 7=42560+42)$

## Using doubling and halving

$35 \times 8$ (double, double and double again)
Double 35 is 70 , double 70 is 140 , double 140 is 280

With jottings
$73 \times 5$ (multiply by 10 and then halve)
$73 \times 10=730$ Half of 730 is 365 (Some pupils may need to partition 730 in a different way)

## Using factors

$15 \times 6=15 \times 3 \times 2$
$15 \times 3=4545 \times 2=90$
with jottings
$8 \times 18=8 \times 9 \times 2$
$8 \times 9=7272 \times 2=144$

## Using known facts and place value

$24 \times 10=240$ so $24 \times 9=216$
(by subtracting 24 from 240)
$800 \times 6$
$8 \times 6=48$ so $800 \times 6=4800$

ABSTRACT

| 36 |
| ---: |
| $\times \quad 4$ |
| 24 |
| 120 |
| 144 |

14
$\qquad$

## MULTIPLICATION: Y5

## Understanding the operation and vocabulary

## Understanding the operation

Continue to develop understanding of multiplication to include:

- scaling by simple fractions
- simple rates

Continue to understand the distributive, commutative and associative laws
Recognise that $37 \times 6$ is the same as $30 \times 6$ added to $7 \times$ 6 (distributive)
Recognise that $25 \times 7$ is equal to $7 \times 25$ (commutative) recognise that if calculating $18 \times 4 \times 10$ the numbers can be combined in any order (associative)

Continue to understand the inverse relationship between multiplication and division
write the related number sentences
$6 \times 0.7=4.2 \quad 0.7 \times 6=4.2 \quad 4.2=6 \times 0.7 \quad 4.2=0.7 \times 6$
$4.2 \div 0.7=6 \quad 4.2 \div 6=0.7 \quad 0.7=4.2 \div 6 \quad 6=4.2 \div 0.7$

Continue to solve missing number problems

| $6 \times \square=540$ | $\square=0.4 \times 8$ | $480=\square \times \square$ |
| :--- | :--- | :--- |
| $90 \times 40=6 \times \square$ | $2.5<\square \times 5$ | $\square \times \square>700 \times 8$ |

begin to use brackets
$(10+3) \times 7=\square$

$$
\square=10+(0.4 \times 8)
$$

## Vocabulary

Understand, read and spell vocabulary related to multiplication correctly
Also see previous years
$12 \times 5=60$
factor x factor $=$ product

## Number Sense and Fluency

## Number facts

Use knowledge of counting in multiples to count in decimal steps (one decimal place)
0.61 .21 .82 .4 ...
8.4 7.7 7.0 6.3 ...

Derive doubles of decimals (to one decimal place)
using knowledge of place value
Double 0.4 is $\square \quad 0.7 \times 2=\square$
Double 3.8 is $\square \quad 5.6+5.6=\square$
Continue to recall multiplication facts for multiplication tables up to $12 \times 12$ fluently, and derive and use related facts
$\begin{array}{ll}7 \text { groups of } 8 & \text { multiply } 12 \text { by } 9 \\ \text { the product of } 80 \text { and } 40 & 0.6 \text { multiplied by } 4\end{array}$
Identify multiples and factors, and common factors of two numbers.
list the factors of 96
identify the common factors of 30 and 36 by listing factor pairs
give a number that is a multiple of 3 and a multiple of
2 (and recognise these are multiples of 6)
Establish whether a number up to 100 is prime and recall primes up to 19 ; find prime factors
explain why 23 is a prime number
list the prime factors of 40
Recognise and use square and cube numbers
What is... $8^{2}$ ? $3^{3}$ ?

## Mental Methods and Jottings

Multiply numbers mentally drawing upon known facts
use factors to construct equivalence statements
$4 \times 35=2 \times 2 \times 35$
$3 \times 270=3 \times 3 \times 9 \times 10=9^{2} \times 10$

## Recording

https://www.ncetm.org.uk/resources/52830

Multiply numbers up to 4 digits by a one- or two-digit number using a formal written method, including long multiplication for two-digit numbers.
Multiply numbers with up to one decimal place by one-digit whole number.

Continue to embed understanding through the use of manipulatives and grid method.

## CONCRETE

Pupils can continue to be supported by place value counters at the stage of multiplication.

It is important at this stage that pupils always multiply the ones first and note down their answer followed by the tens which they

## PICTORIAL

| 10 | 10 |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 10 | 100 | 80 |  |  |  |  |
| 3 | 30 | 24 | 1000 | 300 | 40 | 2 |
| 10 | 10000 | 3000 | 400 | 20 |  |  |
| 8 | 8000 | 2400 | 320 | 16 |  |  |

note below.

cube, prime, square, common factors, prime factors composite numbers

## Generalisation

Relating arrays to an understanding of square numbers and making cubes to show cube numbers.
Understanding that the use of scaling by multiples of 10 can be used to convert between units of measure (e.g. metres to kilometres means to times by 1000)

## Misconceptions

- Pupils can struggle to understand why they 'add a zero' when multiplying by the tens digit during column multiplication.
- Pupils may confuse the language of' ten more' and 'ten times greater' mixing addition and multiplication
- Pupils struggle to take account of zeroes already held by numbers when multiplying by 10,100 , 1000.
- Pupils may simply add zeroes when multiplying by 10,100 or 100 , even when they are working with a decimal
- Pupils may find scaling problems challenging if they do not naturally represent these as multiplication. Sometimes they simply interpret scaling as making bigger in general and do not understand the need to keep things in proportion.
begin to multiply tenths, and one-digit whole numbers and tenths by one-digit whole numbers $0.2 \times 3=0.6$

## Partitioning (using the distributive law)

$1.2 \times 7(1 \times 7=70.2 \times 7=1.47+1.4=8.4)$

With jottings
$3.5 \times 7(3 \times 7=21 \quad 0.5 \times 7=3.5 \quad 21+3.5=24.5)$

## Doubling and halving

$3.7 \times 4$ (Double and double again)
Double 3.7 is 7.4 , double 7.4 is 14.8

## with jottings

$76 \times 50$ (multiply by 100 and halve)
$76 \times 100=7600$ Half of 7600 is 3800

## Using factors

$25 \times 12=25 \times 2 \times 6$
$25 \times 2=5050 \times 6=300$
with jottings
$3 \times 270=3 \times 3 \times 9 \times 10=9 \times 9 \times 10=9^{2} \times 10=81 \times 10$
$=810$

## Using Known facts and place value

## $13 \times 19$

$13 \times 20=260$ so $13 \times 19=247$ (subtract 26 from 260)
$3 \times 14$
recognise $3 \times 14$ is equivalent to $6 \times 7$

## Estimating and Checking

Check $86 \times 9$ by using an equivalent calculation
Multiply by 10 and adjust (860-86) or partition (80 x 9 added to $6 \times 9$ )

Bar modelling and number lines can support learners when solving problems with multiplication alongside the formal written methods.

```
    8\times59
    =8\times60-8
    8*60=480
```

## ABSTRACT

## Understanding the operation and vocabulary

## Understanding the operation

Continue to understand

- Scaling by fractions

Of the 90 students on a field trip to the zoo, two ninths want to go to see the bears. How many students want to see the bears?

$$
90 \times 2 / 9 \quad 90 \div 9=10 \quad 10 \times 2=20
$$

- Rate

A car travels 60 miles per hour. How far will it
travel in 2 and a quarter hours?

Use their knowledge of the order of operations BODMAS
Understand that when there are no brackets in an expression, do multiplication or division before addition or subtraction
Understand that if the operations are at the same level
of priority, work out the example from left to right
Continue to solve missing number problems

$$
\begin{array}{lll}
6 \times \square=0.54 & \square=0.06 \times 8 & 4.8=\square \times \square \\
0.9 \times 4=6 \times \square & 0.63<\square \times 0.09 & \square \times \square>0.07 \times 8
\end{array}
$$

Explore the order of operations using brackets
Compare $14 \div(2 \times 5)$ with $(14 \div 2) \times 5$
Compare $2+(1 \times 3)$ with $(2+1) \times 3$

## Vocabulary

Understand, read and spell the vocabulary related to multiplication correctly.
Also see previous years
$12 \mathrm{x} 5=60$
factor x factor $=$ product
common factor/multiple

## Number Sense and Fluency

## Number facts

Use knowledge of counting in multiples to count in
decimal steps (two decimal places)
$0.09 \quad 0.18 \quad 0.27 \quad 0.36 \ldots$
$0.48 \quad 0.44 \quad 0.4 \quad 0.36$.

Derive doubles of decimals (to two decimal places) using knowledge of place value
Double 0.47 is $\square$
$0.73 \times 2=\square$
Double 3.08 is $\square \quad 2.59+2.59=\square$

Continue to recall multiplication facts for multiplication tables up to $12 \times 12$ fluently, and derive and use related facts
30 multiplied by 800 multiply 0.12 by 6
the product of 0.08 and $4 \quad 0.4$ multiplied by 0.5
identify common factors, common multiples and prime numbers
find the highest common factor of 18 and 24
find the lowest common multiple of 6 and 15
identify whether 87 is a prime number
list the prime factors of $84(84=2 \times 42=2 \times 2 \times 21=$
$2 \times 2 \times 3 \times 7$ )
use the tests of divisibility to identify factors and multiples
continue to use square and cube numbers
What is... $12^{2}$ ? $6^{3}$ ?

## Mental Methods and Jottings

Perform mental calculations, including with mixed operations, large numbers and decimals

## Partitioning (using distributive law)

$6.04 \times 3(6 \times 3=180.04 \times 3=0.1218+0.12=18.12)$
With jottings
$0.43 \times 6(0.4 \times 6=2.4 \quad 0.03 \times 6=0.18 \quad 2.4+0.18=2.58)$
https://www.ncetm.org.uk/resources/52830
Multiply multi-digit numbers up to 4 digits by a two-digit whole number using the formal written method of long multiplication

Multiply numbers with up to two decimal places by one-digit and two-digit whole numbers

## CONCRETE

PICTORIAL

## Generalisations

Order of operations: brackets first, then multiplication and division (left to right) before addition and
subtraction (left to right).
B O D M A S
Understanding the use of multiplication to support conversions between units of measurement

## Misconceptions

- Pupils forget to put in a place holder of 0 when multiplying by a tens digit.
- When substituting, students forget that the order of operations applies - this learning for number is not connected to algebraic situations.
- Pupils find the order of operations rules nonintuitive sometimes because they are used to reading from left to right. They do not therefore always carry out multiplication and division before addition and subtraction when a calculation is presented

## Doubling and halvin

$0.24 \times 40$ (double \& double again, then multiply by 10) Double 0.24 is 0.48 , double 0.48 is $0.96,0.96 \times 10=9.6$

## With jottings

$68 \times 25$ (multiply by 100 , then halve \& halve again)
$68 \times 100=6800$ Half of 6800 is 3400 Half of 3400 is 1700

## Using factors

$1.5 \times 16=1.5 \times 2 \times 8=3 \times 8=24$
with jottings
$32 \times 12=32 \times 3 \times 2 \times 2=96 \times 2 \times 2=192 \times 2=384$

## Using known facts and Place value

$17 \times 98$
$17 \times 100=1700$ so $17 \times 98$ is 1666 (subtract $17 \times 2$ from
1700)
$15 \times 18=30 \times 9=270$

## Estimating and checking

Use estimation to check answers to calculations and determine, in the context of a problem, levels of accuracy.
$5872 \times 54$ is approximately $6000 \times 50$
Continue to use appropriate strategies to check answers Check 496 x 5 by using an equivalent calculation
Multiply by 10 and halve or use a known fact and adjust $(500 \times 5)-(4 \times 5)$

## ABSTRACT

Expanded method

## $15.76 \times 3$

15.76
x
3
$0.18(3 \times 0.06)$
2. 10 ( $3 \times 0.7$ )
$15.00(3 \times 5)$
$30.00(3 \times 10)$

## Compact method
